PROFILE

Tech lead at Sagelyn AI, a multi-tenant AI marketing platform serving 80+ small businesses. I set technical direction across five repositories (React/TypeScript and four Python services on AWS), plan and review the team's work, and still ship code: 400+ pull requests merged in 8 months. I run the team on an AI-native workflow I built with Claude Code subagents.

EXPERIENCE

Sagelyn AI — Mar 2026 – Present

app.sagelyn.ai — AI marketing platform: social publishing, content and video generation, CRM and AI agents

Tech Lead — **Oct 2026 – Present**

- **AI-assisted engineering** — built the team's Claude Code workflow: a *ship-feature* pipeline of planner, implementer, code-reviewer and QA subagents, custom skills that encode our AWS SAM, IAM, backend and Jira conventions, and a codebase knowledge graph plus an Obsidian vault of past fixes, connected through MCP to Jira, Slack, GitHub and the browser.
- **Technical leadership** — own architecture and delivery for the whole product: turn tickets into implementation plans with acceptance criteria, review pull requests across all five repositories, and run the weekly production release.
- **SOC 2 compliance in CI** — designed and rolled out a shared GitHub Actions compliance workflow to every repository (secret scanning, dependency audits, cfn-guard, Semgrep); its first run caught 270+ vulnerable dependencies and 2 leaked API keys.

Full-Stack Developer — **Mar 2026 – Oct 2026**

- **AI Visibility Manager agent** — an AI employee that helps local businesses get recommended by ChatGPT, Perplexity and Google: visibility score with GoHighLevel lead capture, Google Business Profile fix cards, Reddit insights, and a hosted SEO blog.
- **AI agents and CRM** — long-term agent memory (brand preferences recalled across chats) and GoHighLevel tools: contact import with LLM column mapping, calendar booking, call history and lead alerts.
- **Frontend** — primary developer on the React 18 / TypeScript app, consuming 16 services across five repositories.
- **Platform integrations** — OAuth 2.0 connect and publish for Facebook, Instagram, LinkedIn, YouTube, Google Business Profile, WordPress and TikTok (single-use CSRF state, redirect allowlists), plus GoHighLevel CRM, Google Search Console, Google Drive, Reddit, and hosted blogs for Squarespace, Wix and GoDaddy sites.
- **AI video and images** — avatar video pipeline on HeyGen and Creatomate orchestrated by Step Functions, with auto-captions, background music and Reel / landscape / square framing; renders kept in our own S3/CloudFront; bulk AI images (gpt-image).
- **Security** — led hardening of the social service: tenant checks on every customer-scoped route (IDOR), SSRF-safe fetching, CORS allowlists, KMS-encrypted token storage and log hygiene. Shipped TOTP multi-factor sign-in and expiring review links.
- **Scheduling and analytics** — timezone-aware scheduling across three Lambda services (160+ new tests); analytics rebuild.

Frontend & QA Engineer — CyTech International — Nov 2025 – Feb 2026

Cagayan de Oro R&D office — AQUILA cybersecurity platform (Wetware, Touchstone, C4I) for security leaders

- **Frontend** — built and maintained 20+ AQUILA dashboard screens (workforce risk, process maps, C4I hub) in React / TypeScript.
- **QA** — wrote and ran manual and automated test cases across releases, and filed and verified defects before release.
- **Release quality** — added regression checks before each release; tested permissions, data exposure and audit trails.

IT Intern — Provincial ICT Division, Province of Bukidnon · *490 hours · Certificate of Achievement* — Jan – May 2025

- **Infrastructure** — helped deliver the ₱33.3M data center, fiber backbone, CCTV and IP-PBX projects: installed hyperconverged infrastructure in two data centers, built a 3-tier redundant network (VLANs, DHCP, Cisco and Ruijie switches) and campus Wi-Fi.
- **Servers and security** — migrated servers across both data centers and an AWS-hosted app behind an Nginx reverse proxy, added Let's Encrypt SSL to 7 government web apps, and configured a Sangfor NGAF firewall with web filtering and a captive portal.
- **Software** — built an HR (HRMIS) dashboard, migrated the provincial website, built an interactive tourism map for Kaamulan 2025, and contributed to fuel inventory and ARTA client-satisfaction systems; documented Zabbix monitoring.

Freelance & Contract Developer · *Laravel / PHP multi-tenant SaaS, four client projects, MERN apps, Apps Script* — 2022 – 2025

TECHNICAL SKILLS

Frontend	React 18, TypeScript, Next.js (App Router), Tailwind CSS, MUI, Redux, Zustand · Jest, Playwright, pytest
Backend	Python, FastAPI, Docker, Node.js, Laravel, PHP · DynamoDB, PostgreSQL, MySQL, MongoDB
Cloud & network	AWS Lambda, API Gateway, S3, CloudFront, SQS, EventBridge, Cognito, KMS, SAM · Nginx, VLANs, firewalls
AI	Amazon Bedrock (Claude), OpenAI (gpt-image), Gemini, Perplexity, HeyGen, Creatomate, Firecrawl, RAG
AI dev tools	Claude Code: subagents, custom skills, hooks, MCP servers · Claude Fable, Opus, Sonnet
Languages	Cebuano (native), Filipino, English (professional working proficiency)

EDUCATION

BS Information Technology — Bukidnon State University · *Capstone: GPS IoT visitor monitor, chosen for patent filing* — 2021 – 2025
